## Warranty Request Forms for Canadian Customers ONLY

The forms that follow must be completed and faxed to ARTERRA Distribution along with the RV/product Proof of Purchase when making a request for warranty consideration.

**STEP 1.** Complete all entries on the Warranty Information Fax sheet that immediately follows this notice. The form can be completed on your computer and then printed out for faxing. To save an electronic copy, print as a pdf document. Use the Print button on the bottom of the page.

**STEP 2.** The forms that follow the Warranty Information Fax sheet are Troubleshooting forms that pertain to the particular product for which you want warranty consideration. If you have completed the information on the Warranty Information Fax sheet, this basic information has been transferred to the top half of these forms for you.

Select the form for the product you have. Print out ONLY that form using the print button on the bottom of the page. Complete the questions on the bottom section of the form.

**STEP 3.** Fax the Warranty Information Fax sheet, Proof of Purchase and the Troubleshooting form for your product to 574-294-8698. If you don't have access to a fax machine, scan the 3 pages, save as a pdf and email the document to [warranty@wfcoelectronics.com](mailto:warranty@wfcoelectronics.com). For pumps only, email the document to [warranty@artisproducts.com](mailto:warranty@artisproducts.com). Put "Warranty Request" in the subject line of the email message. All warranty requests will be processed within 3 business days of receipt.

**WF-8700 Series Testing Procedure**

Disconnect battery to isolate the converter. Is battery disconnected: \_\_\_\_\_ Yes/No? Plug the shore cord into 30 or 50 Aac service as required. Is shore cord plugged into 30/50 Aac: \_\_\_\_\_ Yes/No?

Access to the wire at the back of the converter is necessary for testing the WF-8700 Series. Depending on its location, this can be accomplished by pulling the unit out of the wall or removing a seat or other access panel. Verify AC voltage is delivered to the converter. This can be accomplished by measuring across the output of the breaker (black wire) providing the power to the converter and Neutral Terminal Bar (white wire): Voltage at Converter: \_\_\_\_\_ Vac.

Turn off the converter's breaker. Pull the reverse protection fuse(s) from the fuse board and measure the fuse continuity: \_\_\_\_\_/\_\_\_\_\_ Ohms.

Turn breaker on and measure the voltage across the left fuse holder and the 10 AWG white wire coming out the back of the converter: \_\_\_\_\_ Vdc.

Replace the reverse protection fuse and measure across the red wire and white wire coming out of the back of the converter: \_\_\_\_\_ Vdc.

Do the lights work: \_\_\_\_\_ Yes/No? Explain: \_\_\_\_\_
